

**Amendments to the Specification:**

1. Please amend Paragraph 0020 as follows:

Computer system 110 typically includes a variety of computer readable media. Computer readable media can be any available media that can be accessed by computer system 110 and includes both volatile and nonvolatile media, removable and non-removable media. ~~By way of example, and not limitation, computer readable media may comprise computer storage media and communication media.~~ Computer storage media includes volatile and nonvolatile, removable and non-removable media implemented in any method or technology for storage of information such as computer readable instructions, data structures, program modules or other data. Computer storage media includes, but is not limited to, Random Access Memory (RAM), Read Only Memory (ROM), Electrically Erasable Programmable Read Only Memory (EEPROM), flash memory or other memory technology, Compact Disk Read Only Memory (CDROM), compact disc-rewritable (CDRW) digital versatile disks (DVD) or other optical disk storage, magnetic cassettes, magnetic tape, magnetic disk storage or other magnetic storage devices, or any other medium which can be used to store the desired information and which can accessed by computer system 110. Communication media typically embodies computer readable instructions, data structures, program modules or other data in a modulated data signal such as a carrier wave or other transport mechanism and includes any information delivery media. The term “modulated data signal” means a signal that has one or more of its characteristics set or changed in such a manner as to encode information in the signal. By way of example, and not limitation, communication media includes wired media such as a wired network or direct-wired connection, and wireless media such as acoustic, RF, infrared and other wireless media. ~~Combinations of any of the above should also be included within the scope of computer readable media.~~

2. Please amend Paragraph 0027 as follows:

For example, MICROSOFT®'s .NET software platform, available from Microsoft Corporation in Redmond, Washington, includes servers, building-block services, such as Web-based data storage and downloadable device software. While exemplary embodiments

**DOCKET NO.:** MSFT-2160/304750.1  
**Application No.:** 10/693,750  
**Office Action Dated:** 6/14/2006

**PATENT**

herein are described in connection with software residing on a computing device, one or more portions of the invention may also be implemented via an operating system, application programming interface (API) or a “middle man” object between any of a coprocessor, a display device and a requesting object, such that operation according to the invention may be performed by, supported in or accessed via all of MICROSOFT® .NET’s software platform languages and services, and in other distributed computing frameworks as well.
